

# coverUp

*the intelligent lid*

## ***What is coverUp?***

CoverUp is a lid with filter in active carbon, created, developed and patented by Ambientalia S.r.l., to be used for movable bin, with capacity of 120/240 l., for the separated collection of organic waste.

Thanks to its peculiar opening and to the high filtering capacity of the gasket adsorbEco, the concentration of bad odours within the bin markedly decreases.

## ***Advantages of coverUp***

Reducing of the frequency of garbage collection and emptying of the silo, with high temperatures as well, particularly during summertime. Decreasing the transportation and relatively the fumes from the vehicles, with remarkable improvement of the quality of air, reduction of expenditures for the collection and drop of urban congestion.

AdsorbEco, thanks to its high filtering performances, presents a considerable reduction of the exhalations either when the bin is opened or closed. Especially thanks to the interruption of stench, insects and animals are not attracted anymore.
